SUMMER BATTERY MAINTENANCE

The battery is a perishable item and requires attention. With a reasonable amount of care, the life of a battery can be appreciably extended. Neglect and abuse will invariably cause shorter battery service life. The battery should be inspected at the time of chassis lubrication or other periodic services.

Batteries expel explosive gases. Keep sparks, flames, burning cigarettes, or other ignition sources away at all times. Always wear safety glasses and a face shield when working near batteries.

WARNING

Battery maintenance includes the following:

6.1. BATTERY MAINTENANCE

Inspect battery and mounting. If corrosion is found on the terminal posts, remove the cable terminals from the battery (ground cable first) using the proper end wrench and a cable puller.

A terminal cleaning brush can be used to clean tapered posts and the mating surfaces of the cable clamps. Stud type terminals can be cleaned with a wire brush. The cable terminals should then be cleaned with an acid neutralizing solution of baking soda and water. Clean dirt from the battery top with a cloth moistened with baking soda and water. Then wipe with a cloth moistened with clear water.

A wire brush can be used to remove dirt, corrosion or rust from the battery tray or hold down parts. After rust is removed, rinse with clear water, dry with air and repaint. After cleaning, reinstall battery and hold down parts as instructed under REMOVAL AND INSTALLATION. Coat battery and cable terminals with terminal grease and connect cables to battery terminals. Connect ground cable last.

When servicing filler cap batteries, check electrolyte level in all cells. If necessary, add clear water to bring the liquid level to the level indicator. If the battery does not have an indicator, add water to bring the liquid level to 1/2" (13 mm) above the top of the separators. Do not overfill any cell. Maintenance free type batteries do not require addition of water under normal operating conditions. If loss of electrolyte is suspected, check electrolyte level as instructed under TESTING and determine cause for low level.

The right tool for the job!

The Navistar Tools Group Product Support team presents the online tools catalog! Access the service tools catalog from your International Service Portal Home Page (click the Service Tools

Ordering & Support tab).

With the online tools catalog, you can:

- Search for a tool by complete tool number.
- Search for a tool by a partial tool number.
- Search for a tool by description.
- Search for a tool by emission year.
- Search for a tool by vehicle type.
- Check current pricing on tools.
- Add tools to a "wish list" cart for review before checkout.
- Review your cart in the checkout screen.
- Submit your tool order.
- See your past order history.
- View tool images.
- View associated products (when applicable) under the main tool number.

To access the Service Tool Resource Center, log in with your CYY number, click on Service Reference/Service Tool Resource Center.

FRONT LINE TECH SUPPORT

We invite you to contact our Tech Helpline with any technical questions you might have. Contact Doug Yager, 763.271.2982, service@hoglundbus.com

WARRANTY SUPPORT

We invite you to contact our Warranty Dept. with any questions you might have. Contact Brian Tesmer at 763.271.2978, warranty@hoglundbus.com

SERVICE SPECIAL

Our Service Departments are dedicated to meeting all of your service needs and to keep your fleet running in top condition.
